DAP Xi Series – Powered by CELESTION

DAP's Xi Series consists of a range of passive speakers and subwoofers that have been specially designed for installation purposes. With a compact, modern design and versatile mounting options they're the perfect solution for all sorts of locations: bars, restaurants, shops, gyms and more.

An accurate, full-range, Hi-Fi sound is guaranteed no matter which speaker you choose. Every model can be used on its own, linked with other Xi speakers or combined with Xi subwoofers for extra low end.

With woofer sizes ranging between 4 inches and 10 inches and both vertical and horizontal placement possible, finding the perfect Xi speaker for any situation is easy. Available in black and white, they complement any surroundings too.

The 4-inch model differs from the other speakers in range with a line-array design that makes it possible to combine them in a line array setup for optimal sound dispersion.

The DAP Xi subwoofers combine perfectly with the Xi speakers and add deep, powerful bass to any setup. Equipped with a double 8-inch or a 12-inch woofer, the subwoofers allow bi-amp control and are equipped with an internal filter for passive filtering. To match the Xi speakers, both models are also available in black and white.

A range of brackets for mounting, hanging or suspending the speakers makes installation quick and easy too.
