YouTube Live™

Core Features

Stream to multiple platforms including Livestream, Ustream™, Akamai™, Adobe Media Server™, Zixi™, Wowza Streaming Server™, Facebook Live, Twitch Youtube Live™.

Record in broadcast quality MJPEG AVI with up to 4 simultaneous isolated recordings.

Export recordings as MP4 files for quick sharing on the web and social networks.

Cut or transition sources between Preview and Program. Preview your GFX overlays before transitioning them into Program.

Switch live sources in frame-accurate HD, with up to four external multiview displays.

Insert advertisements directly into your program with the click of a button. Sourced from Google DFP.

Mix audio with accurate ppm displays, volume adjustment, monitoring and track grouping.

Utilize up to 25 live inputs via webcams, Blackmagic Design devices, or Magewell device, plus 10 remote camera sources, 10 RTMP inputs, 2 media tracks, and 3 GFX tracks.

Convert different input sources in real-time to match your project format.

Create a wireless, multi-camera production using mobile devices or desktop computers as video sources.

Import any popular media format or add recordings as clips in the Media Player list. Scrub your video to find the ideal moment, trim in/out points and set clips to autoplay with your transitions.

Create powerful, layered broadcast graphics using editable layers of text, images and video. Connect multiple external data sources to add text from places like Google Spreadsheets and Twitter feeds.
